K.E.Turver (University of Durham)

We have reported the discovery of VHE gamma ray emission from the X-ray binary Cen X-3. We report further VHE observations of this object taken in 1998 and 1999. We have also made VHE observations of Vela X-1 and 4U1626-67 using the University of Durham Mark 6 telescope. The results of an analysis of the data from these observations will be reported.
