

## **A Catalog of OSSE Observations of Discrete Sources**

D.C.Messina (SFA,Inc.), J.E.Grove, J.D.Kurfess, W.N.Johnson, M.S.Strickman (NRL)

We present a catalog of discrete sources observed by OSSE during the first eight years of the Compton GRO mission. Since launch OSSE has observed over 140 discrete galactic and extragalactic gamma-ray objects. A standardized analysis of these sources has lead to the development of the OSSE High-Level Products database from which a catalog of observed sources is readily derived. The catalog includes flux in standard energy bands, observing times, live time on source, and detection significance as well as other statistical information.
