

## **Observations of some X-ray transients with RXTE**

K.N.Borozdin, W.C.Priedhorsky (Los Alamos National Laboratory), M.G.Revnitsev, A.N.Emelyanov, S.P.Trudolyubov (Moscow Space Research Institute), A.A.Vikhlinin (Harvard-Smithsonian Center for Astrophysics)

Results of observations of several X-ray transients with RXTE in 1997-1998, namely, XTE J1748-288, GS 1354-64, 2S1803-245 and CI Cam, are presented. Light curves of the outbursts and spectra are discussed in comparison with earlier observations. Unique features for each system are mentioned. Special attention is paid to CI Cam as possible legate for new class of X-ray transients.
