

## *SSC Issues*

### *COMPTEL Presence at SSC*

- Desparately need more COMPTEL results!!!
- Continued CGRO mission becoming very difficult to justify without community interest in COMPTEL.
- SSC is very interested in putting new COMPTEL results on the WWW (Astronomy Picture of the Day).

### *COMPASS at the SSC*

- Limited (personnel) resources at SSC (at most ~1 person).
- COMPASS being set up on `COMPASS.gsfc.nasa.gov` under Solaris.
- Software compiled.
- Database now installed.
- A version of SBMSHELL almost installed (under forms 4.5).
- Minor issues (e.g., PBS batch system) still being worked on.

### *FITSifying COMPASS Data*

- COMPTEL data at SSC still not FITsified per SSC requirements.
- SSC is actively working to establish a conversion pipeline.
- Should different (but related) datasets be combined into a single FITS datafile (e.g., EVP, DRE, DRX, DRG)? Fewer number of datasets might be easier to work with.

## *SSC Issues (cont)*

### *COMPTEL CD*

- Still in limbo.
- SSC (Barrett) is more interested in low-level data products on CD(s), which would be easier to provide.
- Higher-level products (all-sky maps, etc.) would require more effort on part of the team.
- Do we still want to pursue this project?

### *Publication Database (Stacy at LSU)*

- Working to establish basic database table.
- Electronic versions of papers will be added later.

### *WWW pages (Stacy at LSU)*

- Needs to be updated.
